

Transformer Requirements

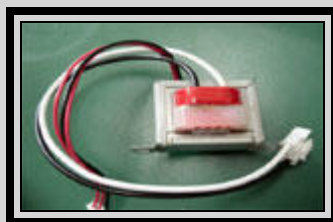

Turnkey Manufacturing Limited core business has always been Printed Circuit Board Assemblies (PCBAs), but we have noticed over the years of producing PCBAs for our customers, that most contain a **TRANSFORMER** or a **COIL** which has always been purchased by the customer, or by ourselves from a specialist supplier. We believe that the length of this supply chain makes the **TRANSFORMER/COIL** a more expensive component than we believe to be necessary.

So rather than buy the **Transformer** product in from such a supplier, we have added a **WINDING PLANT** to our manufacturing arm in China.

Turnkey Manufacturing Limited can now provide custom made **transformer** products direct from our own manufacturing plant. Hence making significant reductions to the cost of the components, and the completed PCBA. This service encompasses most wound components, from a simple inductor, to the most sophisticated wound transformer, with as many outputs as your design necessitates.

The **Turnkey Manufacturing Limited** Transformer / Coil factory in the Far East is approved to ISO 9001-2000, which enables us to produce any wound component for most of the different aspects of the electronic / electrical industry.

So if you do purchase Transformers, perhaps it is a good time to ask for a quote. Or if you simply buy **WOUND COMPONENTS** which you think are too expensive, ask **Turnkey Manufacturing Limited** for a quotation.
